

Deliver the best experience!

In a world where logistics must become faster, smarter, and more sustainable, every detail matters. Whether it concerns deliveries to stores, consumers, or hubs; visibility of the trip alone is no longer enough. Customers expect more. Before, during, and after the delivery.

That's why Simacan and Aventeon work closely together to enable the ultimate delivery experience. From the first planned kilometre to the moment the final recipient receives their parcel, every detail counts.

Delivering the best possible experience – together

With Simacan and Aventeon, you have the tools to:

- ✓ anticipate delays;
- ✓ gather transport data across the chain for CO2 reporting;
- ✓ enable drivers to work more efficiently;
- ✓ structurally improve customer satisfaction.

Whether you manage transport, fleet operations, or planning, you benefit from a direct connection between chain control and field execution.

This integrated approach is already successfully in use at organisations such as DHL Supply Chain Germany & Alps and Boels Rental, where real-time visibility, smart execution, and on-site collaboration ensure optimal delivery performance every day.

Take the guesswork out of logistics

Simacan is the driving force behind an advanced, cloud-based *logistics Control Tower*, providing real-time insight into your entire transport operation. From departure to arrival, you see exactly what is happening, or not happening. With smart ETA calculations, automatic alerts in case of delays, and continuous comparison between planning and execution, Simacan helps you improve every trip.

Simacan's *Control Tower* offers real-time visibility, a unified view of planning versus execution, and performance monitoring that continuously optimises your logistics operation. For urban distribution and zero-emission zones, Simacan also supports sustainable choices: with battery management for electric vehicles, so you always know when and where to charge and how to keep your day running smoothly.

- ✓ Middleware platform
- ✓ Real-time transport visibility
- ✓ Planning versus execution in a single overview
- ✓ Automatic alerts and transport performance monitoring
- ✓ Support for zero-emission & urban logistics

 **Logistics1**
Delivery App for Any Process

Empowering drivers with seamless execution

Aventeon's *Logistics1* app ensures that drivers always know exactly what needs to happen, where and when. Whether for store replenishment or home delivery, the app supports every logistics process with clear workflows, real-time communication, and immediate feedback.

- ✓ Always up-to-date route and delivery information
- ✓ Photos and digital signatures instantly available
- ✓ Flexible workflows for every type of delivery
- ✓ Two-way communication with planning and customer

Linking *Logistics1* with Simacan's *Control Tower* creates a fully closed information chain, from trip planning to customer feedback. Not fragmented, but a fully integrated ecosystem.
